

New

# Record Plus PremEon™S

Electronic trip unit for frames FE and FG

Simple and reliable

GE imagination at work

# Simple sophistication

New electronic trip unit

PremEon is a new line of electronic trip units designed to offer uncompromising reliability in all network environments.

The first of the line, **PremEon S**, combines sophisticated 32 bit technology with a complete set of protection functions.

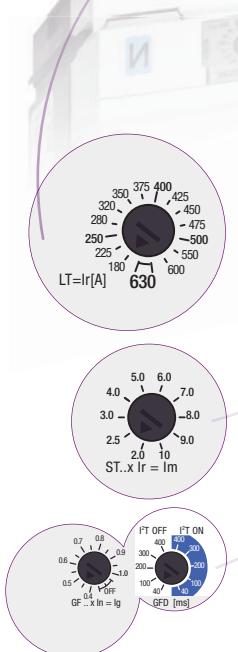

*Simple dials provide access to a wide setting range of 0.3 to 1 times  $I_n$ .*

Designed to fit the Record Plus line of moulded case circuit breakers, the devices are available as 3 or 4 pole units in a current range of 7 to 630A.

## PremEon™ S

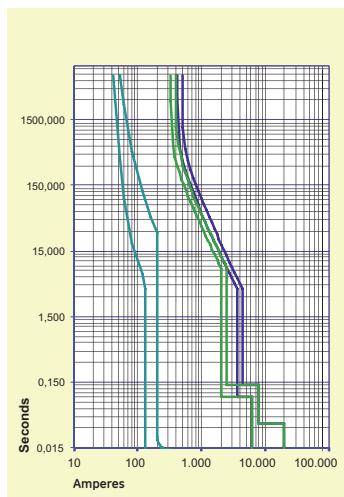

Each standard unit has between two and four overcurrent protection devices:

- An overload protection (**LT**) with a range of 0.3 to 1 times the chosen trip unit rating<sup>(1)</sup>. Each of the possible 15 positions has a rating mentioned in Amps.
- A delayed short-circuit protection (**ST**) with a wide setting band of 2 to 13<sup>(2)</sup> times the **LT** device setting or  $Ir$  value. A fixed time setting per breaker size is applied.
- A selective instantaneous device (**I**) set at a fixed value of 14<sup>(2)</sup> times the chosen trip unit rating, using waveform recognition to assure selectivity.
- An optional ground fault protection device (**GF**) (residual principle) can be set from 0.4 to 1 times the chosen trip unit rating and be used with multiple delay and/or  $I^2T$  settings.

# The selective choice

New electronic trip unit

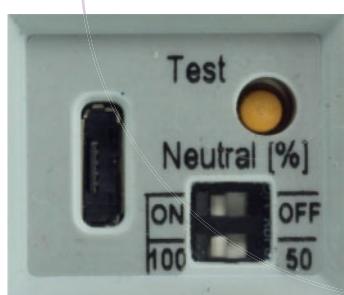

PremEon together with the unique selective and current limiting line of Record Plus line circuit breakers offer strongly improved selectivity between upstream and downstream devices.

The use of highly accurate sensing technology and of state-of-the-art electronics, reduces the tolerances on expected tripping currents and the associated time spans to a minimum.

The result as depicted in the time current curve: selectivity up to 10,000A between a upstream breaker set at 180A and a downstream breaker set at 145A.

*PremEon makes selectivity possible between downstream and upstream devices with a ratio between settings of 1.25.*

Selectivity on higher currents is assured by the unique selective and current limiting properties of the implemented Record Plus FG630 (set at 180A) and FE160 (set at 145A) circuit breakers.

## Integrated test kit

Simply connect a standard mobile phone charger<sup>(1)</sup> to the micro USB port and the "TEST" button goes live. Depress it and it checks the full electronic circuit and then trips the connected breaker.

*Integrated "TEST" function that only needs a USB phone charger.*

The USB port also functions as a data access port, allowing the user to verify the breaker settings. The data are covering last 10 fault occurrences and waveform data of the last event<sup>(2)</sup>.

In this configuration, the PC powers the trip unit (charger no longer needed).

## Prepared for the future

PremEon S is the first of a new generation of Record Plus trip units. They are interchangeable, designed to allow for future upgrades and have a user definable neutral protection (4 pole devices only).

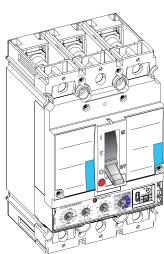

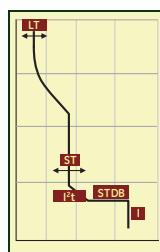

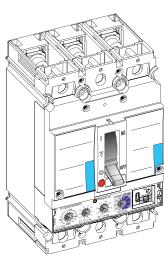

(1) To IEC 62684 - Standard for mobile phone chargers  
(2) Software available on request.

# GE Industrial Solutions

GE Industrial Solutions is a first class global supplier of low and medium voltage products including wiring devices, residential and industrial electrical distribution components, automation products, enclosures and switchboards. Demand for the company's products comes from wholesalers, installers, panelboard builders, contractors, OEMs and utilities worldwide.
