

$V_{(BR)DSX} / V_{(BR)DGX}$	$R_{DS(on)} (max)$	$I_{DSS} (min)$	Package
800V	380Ω	20mA	SOT-23

Features

- High Breakdown Voltage: 800V
- Low $V_{GS(off)}$ Voltage: -1.4V to -3.1V
- Depletion Mode Device Offers Low $R_{DS(on)}$ at Cold Temperatures
- High Input Impedance
- Small Package Size: SOT-23

Applications

- Constant Current Regulator
- Ignition Modules
- Normally-On Switches
- Solid State Relays
- Converters
- Telecommunications
- Power Supply

Description

The CPC3982 is an N-channel, depletion mode, field effect transistor (FET) that utilizes IXYS Integrated Circuits' proprietary third-generation vertical DMOS process. The third-generation process realizes world class, high voltage MOSFET performance in an economical silicon gate process. Our vertical DMOS process yields a robust device, with high input impedance, for use in high-power applications. The CPC3982 is a highly reliable device that has been used extensively in our Solid State Relays for industrial and telecommunications applications.

This device excels in power applications that require low drain-source resistance, particularly in cold environments such as automotive ignition modules.

The CPC3982 has a minimum breakdown voltage of 800V, and is available in an SOT-23 package. As with all MOS devices, the FET structure prevents thermal runaway and thermal-induced secondary breakdown.

Ordering Information

Part #	Description
CPC3982TTR	N-Channel Depletion Mode FET, SOT-23 Pkg. Tape and Reel (3000/Reel)

Package Pinout

Circuit Symbol

Absolute Maximum Ratings @ 25°C (Unless Otherwise Noted)

Parameter	Ratings	Units
Drain-to-Source Voltage	800	V
Gate-to-Source Voltage	±15	V
Pulsed Drain Current	150	mA
Total Package Dissipation ¹	0.4	W
Junction Temperature	125	°C
Operational Temperature	-55 to +110	°C
Storage Temperature	-55 to +125	°C

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

Typical values are characteristic of the device at +25°C, and are the result of engineering evaluations. They are provided for information purposes only, and are not part of the manufacturing testing requirements.

¹ Mounted on 1"x1" 2 oz. Copper FR4 board.

Electrical Characteristics @ 25°C (Unless Otherwise Noted)

Parameter	Symbol	Conditions	Min	Typ	Max	Units
Drain-to-Source Breakdown Voltage	BV_{DSX}	$V_{GS} = -5.5V, I_D = 100\mu A$	800	-	-	V
Gate-to-Source Off Voltage	$V_{GS(off)}$	$V_{DS} = 15V, I_D = 1\mu A$	-1.4	-	-3.1	V
Change in $V_{GS(off)}$ with Temperature	$dV_{GS(off)}/dT$	$V_{DS} = 15V, I_D = 1\mu A$	-	-	4.5	mV/°C
Gate Body Leakage Current	I_{GSS}	$V_{GS} = \pm 15V, V_{DS} = 0V$	-	-	100	nA
Drain-to-Source Leakage Current	$I_{D(off)}$	$V_{GS} = -5.5V, V_{DS} = 800V$	-	-	1	μA
Saturated Drain-to-Source Current	I_{DSS}	$V_{GS} = 0V, V_{DS} = 15V$	20	-	-	mA
Static Drain-to-Source On-State Resistance	$R_{DS(on)}$	$V_{GS} = 0V, I_D = 20mA, V_{DS} = 10V$	-	-	380	Ω
Change in $R_{DS(on)}$ with Temperature	$dR_{DS(on)}/dT$		-	-	2.5	%/°C
Forward Transconductance	G_{FS}	$I_D = 10mA, V_{DS} = 10V$	15	-	-	m Ω
Input Capacitance	C_{ISS}	$V_{GS} = -3.5V$ $V_{DS} = 25V$ $f = 1MHz$	-	20	-	pF
Common Source Output Capacitance	C_{OSS}			2.2		
Reverse Transfer Capacitance	C_{RSS}			1.3		
Source-Drain Diode Voltage Drop	V_{SD}	$V_{GS} = -5V, I_{SD} = 5mA$	-	0.6	1	V
Thermal Impedance, Junction to Ambient	Θ_{JA}	-	-	250	-	°C/W

PERFORMANCE DATA*

*Unless otherwise noted, data presented in these graphs is typical of device operation at 25°C.

Manufacturing Information

Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. IXYS Integrated Circuits classifies its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a **Moisture Sensitivity Level (MSL)** classification as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

Device	Moisture Sensitivity Level (MSL) Classification
CPC3982T	MSL 1

ESD Sensitivity

This product is ESD Sensitive, and should be handled according to the industry standard **JESD-625**.

Soldering Profile

Provided in the table below is the **IPC/JEDEC J-STD-020** Classification Temperature (T_C) and the maximum dwell time the body temperature of these surface mount devices may be ($T_C - 5$)°C or greater. The Classification Temperature sets the Maximum Body Temperature allowed for these devices during reflow soldering processes.

Device	Classification Temperature (T_C)	Dwell Time (t_p)	Max Reflow Cycles
CPC3982T	260°C	30 seconds	3

Board Wash

IXYS Integrated Circuits recommends the use of no-clean flux formulations. Board washing to reduce or remove flux residue following the solder reflow process is acceptable provided proper precautions are taken to prevent damage to the device. These precautions include but are not limited to: using a low pressure wash and providing a follow up bake cycle sufficient to remove any moisture trapped within the device due to the washing process. Due to the variability of the wash parameters used to clean the board, determination of the bake temperature and duration necessary to remove the moisture trapped within the package is the responsibility of the user (assembler). Cleaning or drying methods that employ ultrasonic energy may damage the device and should not be used. Additionally, the device must not be exposed to halide flux or solvents.
